

# Master Thesis Project

Sławomir Nowaczyk

# Course Basics

## 30 credits course

- 20 weeks of full-time work
- 800 (!) hours of work (per person)

## Web pages:

# Goal

...provide training in **independent**  
technological/scientific **research**  
and **development** work within the  
field of **Embedded and Intelligent**  
**Systems** in Computer Science and  
Engineering

# Examiners

- **Embedded Systems**
  - Alexey Vinel
  - Mohamed Eldefrawy
- **Intelligent Systems**
  - Slawomir Nowaczyk
  - Fernando Alonso-Fernandez

# Learning Outcomes

- **Independently** search for solutions
- Use advanced methods of analysis and construction
- **Discuss** the international research and development
- **Assess** scientific papers
- **Relate** own work to international research
- **Present and defend** own work

# Grading Criteria

- Overview & understanding of **needs** and **related** work
  - Highlight **weak & strong parts** in referenced works and how it **differs** from the own work
- **Understanding** and **refinement** of problem/research questions
  - Identify methods **needed** to investigate the problem and answer the questions
- Method & setup of study/experiments to get & **evaluate** results
  - Define enough tests/measurements to get sufficient results & **evidence for conclusions**
- Solution of problem or answer of question and other results
  - Solve problems, create & evaluate feasible solutions, **analyse the quality of results**
- Initiative, creativity, ambition, planning and organization
  - Use feedback from supervisor for reflection, rather than asking for solutions
- Final oral presentation and final report
  - Results and the **conclusions** are clearly stated, discusses **different aspects** of the problem

# Core Requirements

- Understand the problem
  - **in context!**
- Formulate research question(s)
  - **novelty!**
- Develop a solution
  - **in context!**
- Evaluate the results
  - **rigorously!**
- Summarise the findings
  - **conclusions!**

# Process

# Process Overview

- Topic selection
  - until Sunday, 27<sup>th</sup> of October, 15:00
- Start report
  - report December 6<sup>th</sup>, presentations 9<sup>th</sup> and/or 11<sup>th</sup>
- Half-time seminar
  - middle of March
- Final seminar
  - end of May

# Topic Selection

(check prerequisites!)

- Look at list of proposed topics
  - talk to supervisors to learn more
- Topics are mainly updated in September
  - there might be new topics still popping up
  - it's possible to propose your own topic, but you need to find a supervisor from ITE
- Provide ranking of three preferred topics
  - by Sunday, 27<sup>th</sup> of October, 15:00 ([GoogleForm](#))
  - you can also indicate preferred partner (but no guarantees)

# Start Report

- Deadline is 6<sup>th</sup> of December
  - for sending to the **examiner!**
- Needs to be approved by supervisor first
  - and you need time to incorporate their feedback
- So a reasonable schedule is:
  - 25<sup>th</sup> of November send report to supervisor
  - 2<sup>nd</sup> of December you get feedback
  - you have a few days to address the comments

# Start Report

- Approximately five pages of text
  - please use the provided LaTeX template
- Report should cover three main aspects
  - problem formulation
  - literature review
  - project plan & management methodology
- A short presentation on 11<sup>th</sup> of December
  - 10 minutes

# Problem Formulation

- What you are going to do and **why**
- How will the result be **evaluated**
- Presented in a way that makes it clear what your intended **contribution** is
- Put the emphasis on the **novelty** of your work, not only on the task itself
- Do not focus too much on implementation

# Literature Review

- You should discuss 5+ research papers
- Well-chosen, i.e., ones that really provide sufficient **coverage** of your main topic
- Provide **reasons** for including particular papers, clearly **relate** them to your project
- Discuss how your work will **extend** the solutions presented in the literature

# Project Plan

- Present the **main** tasks to achieve the results
  - this should be more detailed than 5-6 broad phases
  - split your problem into meaningful **sub-problems**
  - including some form of **success criterion** for each!
- Provide order and the expected timeline
  - including dependencies across tasks, and conditions
- Try to keep it **realistic**
  - e.g., do not forget “report writing”
- Follow a “real” project methodology
  - preferably something agile

# Supervision

- It is **not** instruction!
- Support, guide and tutor
- Keep regular meetings
- **Ask** questions!
- But be **independent**!
- Track the contributions in a group

# Master of Science

# Science

- Be clear about the **science** part of it, do not only focus on the engineering aspect
- What have you **learned** during the project?
- How can your findings benefit the **next person** trying to solve a similar problem?
- What are the **limits** of applicability for the solutions you have proposed?

# Reasoning & Comprehension

- You need to **demonstrate** the ability to **reason** about both problems and solutions
- The learning outcomes and grading criteria focus a lot on **comprehension** skills
- Not enough to solve the stated problem, you need to **describe** and **evaluate** both your solution, as well as your methods

# Conclusions

- When stating your **conclusions**, it is not enough to just describe **work done**
- You need to put your work in context
- Demonstrate the novelty in the project
  - where did you go beyond the state of the art
- Be clear about evaluation of your results
  - how good they are, why those methods were chosen, how to proceed next, lessons learned, ...

# Report

# Report Writing

- Refer in text to all figures and tables
  - explain their purpose, not only what they show
- Provide full bibliography references
  - pick whichever style you prefer, but don't mix them
- Use clear and consistent notation in text
  - font for scalar and matrix, explain abbreviations, ...
- Use sections & subsections for readability
  - choose their titles and their contents carefully

# Materials

# Useful Material

- [Course syllabus](#)
