Intelligent claim Process

Seamless - transparent

Historical claims data that helped Volvo build safer cars for decades together with the latest technology will create claim processes unseen of today. By letting the customer use their device of choice, together with data straight from the cars, we will be able to deliver a claims journey far beyond of what car insurance is today.

  Real time analytics -

Risk-as-a-Service

We know risk

By leveraging our ability to be the best at risk and converting that knowledge along with car-generated data, we will deliver a seamless customer journey by providing dynamic and usage-based insurance in tailor-made situations.
These risk scores can be fully integrated into all our partner platforms, enabling new business models that will change car use and insurance as we know it.

Car sensor data   -   Android Automotive   -   Cloud services   -   Real time behavior analytics   -   Mobile generated data   -   Satellite data
